Superior Solutions for Handling Bulk Fluids and Other Liquids

Products Designed for a Sensitive Environment

Oil transfer pumps are designed specifically to transfer bulk oils, hydraulic fluid and antifreeze or antifreeze mixes. A high horsepower-to-flow ratio assures adequate power to pump viscous fluids at low temperatures. The pump mounts on a standard bung. The pump has an internal bypass valve to bypass flow, if the discharge pressure exceeds the bypass valve setting. The pump can be used to transfer used oil or antifreeze. A suction screen on the inlet or suction pipe must be used to filter out large contaminants when pumping used product.

Features

- Electric motor driven gear type pump.
- Self-priming, positive displacement design.
- Mounts directly on a drum or tank with drum adapter supplied.

(1) CUBET MATERIAL HD-8760 Grade Has The Following Approvals:

- HD-8760 meets specifications contained in FDA regulation 21 CFR 177.1520(c) 3.1 and so may be used as an article or a component of articles intended for use in contact with food, subject to any limitations in the regulations.
- HD-8760 has Health Canada (HPB) No Objection status (maximum use temperature 120°F).
- HD-8760 has UL 94HB rating, provided part thickness is greater than 58 mil. Refer to file E117534(N) in any communication with UL.
- HD-8760 is listed with NSF as meeting the requirements of NSF 51.

(2) Measurements are theoretically correct, but considered approximate due to manufacturing tolerances. Actual values may vary \pm 4%.
